PROJECTS AND RESEARCH

Smart Vehicle launcher - During my third year of college, I conceptualized a mini project focused on enhancing vehicle safety during accidents.

Walking stick for purblind individuals-Developed an IoT-based walking stick designed specifically for visually impaired individuals. It aims to enhance safety and prevent falls through object detection and image classification technology.

Seizure detection and classification-Working on a final year project centered on "Seizure detection and classification utilizing EEG signals". Provides an advance treatment options for individuals affected by seizure.
